

# 4TU.ResearchData & physical objects

Madeleine de Smaele & Roel Janssen

1 March 2023

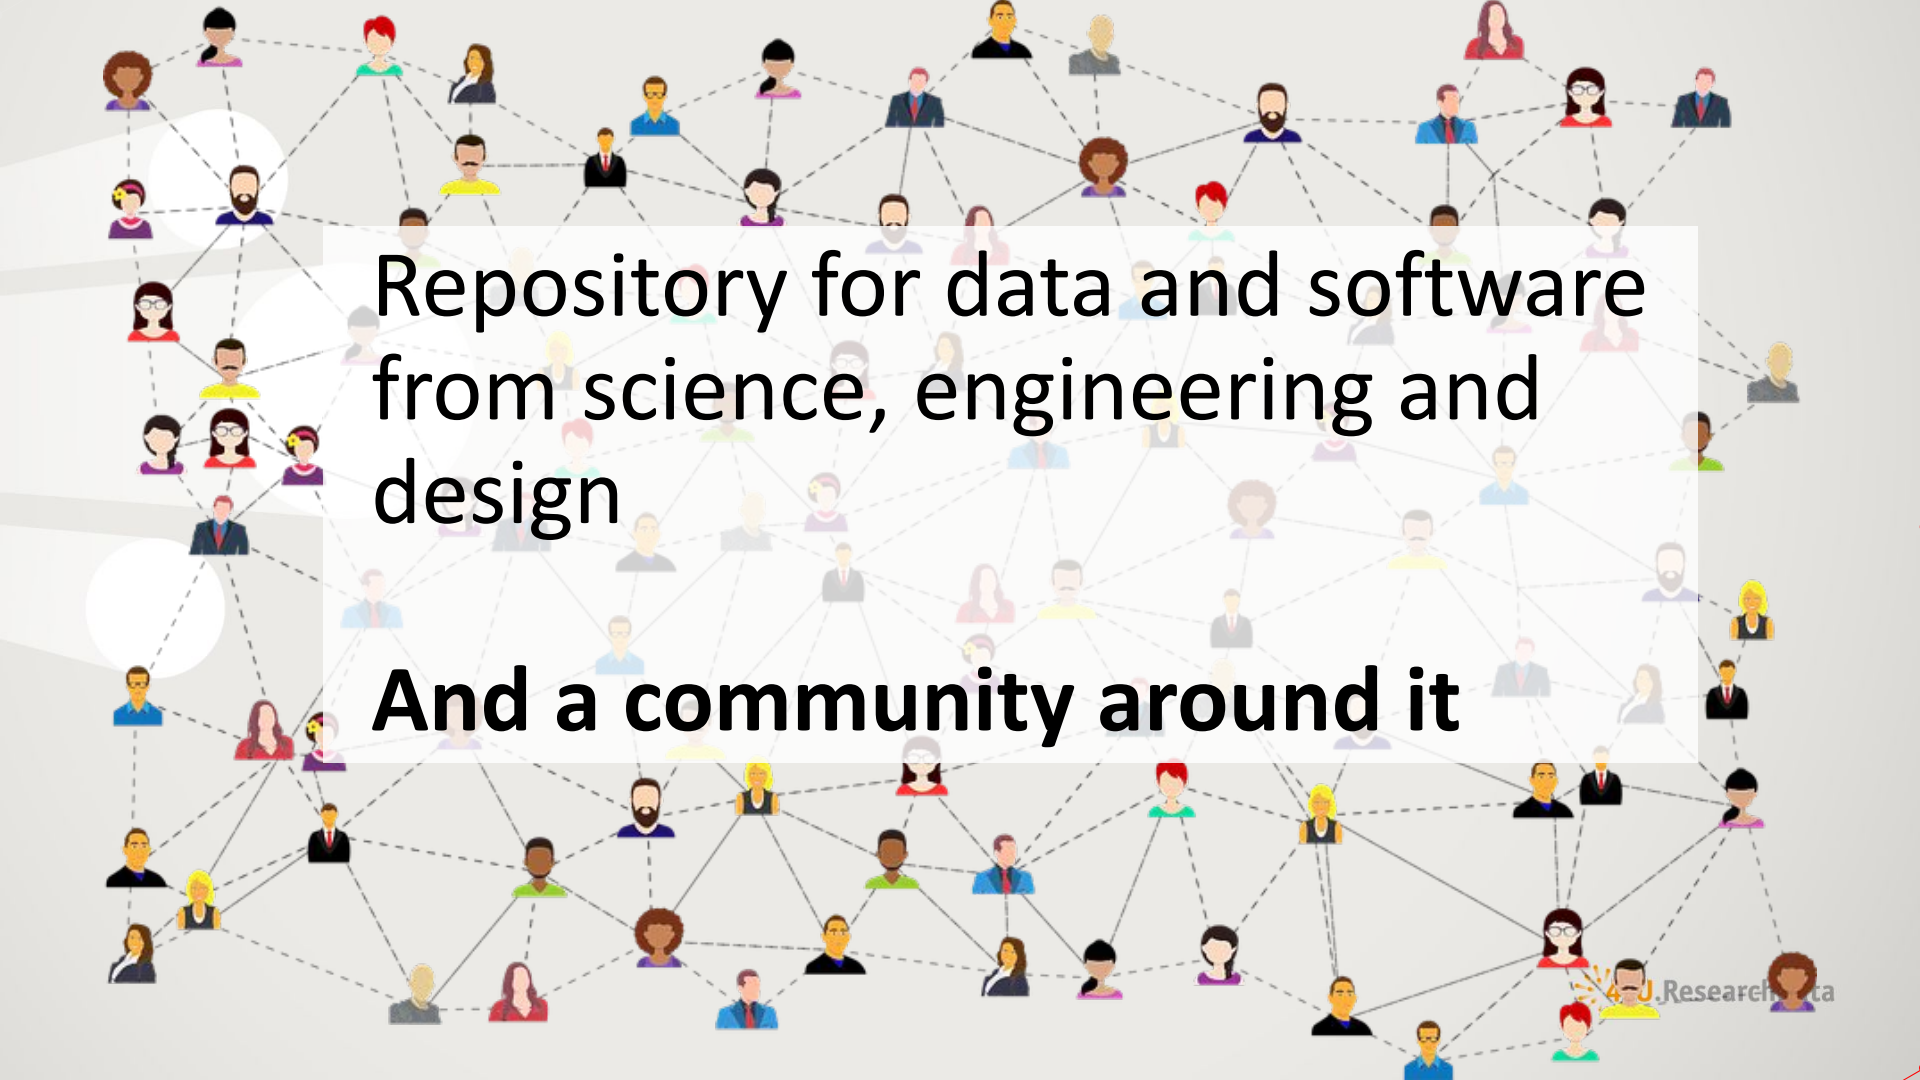

Workshop on FAIR for Physical Objects

# Today

1. What is 4TU.ResearchData?
2. Physical objects/samples:
  - Persistent identifiers
  - Metadata
  - Repository

# What is 4TU.ResearchData?

Repository for data and software  
from science, engineering and  
design

**And a community around it**

# What is 4TU.ResearchData?

- International data repository  
<https://data.4tu.nl/portal>
- Available to researchers globally
- Founded in 2010

Science

Engineering

Design

Sharing

Curation

Access

Preservation

UNIVERSITY OF TWENTE.

4TU.Federation

# 4TU.ResearchData services

- ◇ **Repository - to publish research data and software**
  - DOIs for every datasets, long-term preservation and integrity check, versioning, metadata review, statistics, restricted access, software publication, specialist services for disciplinary formats and workflows
- ◇ **Training - to teach skills needed for reproducible working with data**
  - Essentials for Data Support - key training for aspiring data stewards - as part of RDNL
  - Hands-on workshop for computational skills for reproducible working with data (data and software carpentry)
- ◇ **Consultancy**
- ◇ **4TU.ResearchData Community - network of FAIR Data and Software leaders exchanging knowledge and practice**
  - Working groups
  - Researcher Stories
  - Events and workshops
  - FAIR Data Fund
  - Fellowship programme
  - *Recognising and rewarding FAIR Data*

# Physical objects/samples

---

# Persistent identifiers

IGSN IDs for physical samples

IGSN = International Generic Sample Number.

IGSN ID originates from the Geosciences, but IGSN IDs can be applied to all material samples and features-of-interest (e.g., lake, tree, borehole)

IGSN = DOI -> IGSN-DataCite partnership

Registration of IGSN ID uses the same procedure and service as DOI, but IGSN IDs can only be registered with a designated IGSN ID Repository (with its own prefix).

# Metadata

## DataCite Metadata Schema supports DOI and IGSN ID

The resourceTypeGeneral property is “PhysicalObject” for all IGSN IDs.

```
<resourceType resourceTypeGeneral= "PhysicalObject" >Material  
sample</resourceType>
```

**RelatedIdentifier:** describes relationships between the physical sample for which the IGSN ID is being registered and related resources (subsamples, parent samples, datasets, publications, etc.)

4TU.ResearchData can include a link in the dataset metadata to a physical sample via its IGSN.

More info: <https://support.datacite.org/docs/igsn-id-metadata>

---

# Repository

Centralized or locally hosted:

To register IGSN IDs you must comply with the DataCite **DOI registration policy**, which states that you can only register a DOI for content that you are responsible for.

Number of IGSN IDs registered:

The DOI fee is based on the total number of DOIs/IGSN IDs registered in the previous calendar year.

**Thank you!**
